

## A. Cröll: Publications

A. Cröll and M. P. Volz

Detached Bridgman growth – a standard crystal growth method with a new twist.  
MRS Bulletin 34 no.4 (2009), 245-250 (**Invited Review Article**)

M.P. Volz, K. Mazuruk, M.D. Aggarwal, A. Cröll

Interface shape control using localized heating during Bridgman growth.  
J. Crystal Growth 311 (2009), 2321-2326

R. Lantzsch, I. Grants, V. Galindo, O. Pätzold, G. Gerbeth, M. Stelter and A. Cröll

Fluid flow analysis and vertical gradient freeze crystal growth in a travelling magnetic field.  
Magnetohydrodynamics 42 (2006), 445-449

O. Pätzold, K. Jenkner, S. Scholz, A. Cröll

Detached growth of two inch germanium crystals.  
J. Crystal Growth 277 (2005), 37-43

O. Pätzold, U. Wunderwald, M. Bellmann, P. Gumprich, E. Buhrig, A. Cröll

New Developments in Vertical Gradient Freeze Growth.  
Adv. Engineering Materials 6/no.7 (2004), 554-557

T. Lyubimova, A. Croell, P. Dold, O.A. Khlybov, and I.S. Fayzrakhmanova

Time-dependent magnetic field influence on GaAs crystal growth by vertical Bridgman method.  
J. Crystal Growth 266 (2004), 404-410

M. Bellmann, O. Pätzold, U. Wunderwald, A. Cröll

Axial Macrosegregation in Ga-Doped Germanium grown by the Vertical Gradient Freeze Technique with a Rotating Magnetic Field.  
Crystal Res. Technol. 39 (2004), 193-197

P. Dold and A. Cröll

Reduction of Marangoni convection by magnetic fields.  
J. Japan Soc. of Microgravity Application 20 (2003), 175-182

T.P. Lyubimova, R.V. Scuridin, A. Cröll and P. Dold

Influence of high frequency vibrations on fluid flow and heat transfer in a floating zone.  
Cryst. Res. Technol. 38 (2003), 635-653

A. Cröll, R. Lantsch, S. Kitanov, N. Salk, F. R. Szofran, and A. Tegetmeier  
Melt-crucible wetting behavior in semiconductor melt growth systems.  
Cryst. Res. Technol. 38 (2003), 669-675

A. Cröll, N. Salk, F.R. Szofran, S.D. Cobb, and M.P. Volz  
Wetting angles and surface tension of  $\text{Ge}_{1-x}\text{Si}_x$  melts on different substrate materials.  
J. Crystal Growth 242 (2002), 45-54

A. Cröll, M. Schweizer, P. Dold, Th. Kaiser, M. Lichtensteiger, and K.W. Benz  
Temperature and growth rate fluctuations in silicon floating zones.  
Adv. Space Research 29 (2002), 527-536

O. Pätzold, U. Wunderwald, K. Jenkner, A. Cröll, I. Grants, and G. Gerbeth  
Vertical gradient freeze growth of GaAs with a rotating magnetic field.  
J. Crystal Growth 245(2002), 237-246

J.S. Walker, P. Dold, A. Cröll, M.P. Volz, and F.R. Szofran  
Solutocapillary convection in the float-zone process with a strong magnetic field.  
Int. J. Heat and Mass Transfer 45 (2002), 4695-4702

O. Pätzold, B. Fischer, and A. Cröll  
Melt flow and species transport in  $\mu\text{g}$ -gradient-freeze growth of germanium.  
Cryst. Res. Technol. 37 (2002), 1058-1065

P. Dold, M. Schweizer, A. Cröll, and K.W. Benz  
Measurement of microscopic growth rates in float-zone silicon crystals.  
J. Crystal Growth 237-239 (2002), 1671-1677

N. Kaiser, A. Cröll, F. R. Szofran, S. D. Cobb, and K. W. Benz  
Wetting angle and surface tension of germanium melts on different substrate materials.  
J. Crystal Growth 231 (2001), 448-457

P. Dold, A. Cröll, M. Lichtensteiger, Th. Kaiser, K.W. Benz  
Floating zone growth of silicon in magnetic fields: IV. Rotating magnetic fields.  
J. Crystal Growth 231 (2001), 95-106

T.A. Campbell, M. Schweizer, P. Dold, A. Cröll, and K.W. Benz

Float-zone growth of  $\text{Ge}_{1-x}\text{Si}_x$  ( $x \leq 10$  at.%) single crystals: Influence of thermocapillary and solutocapillary convection. *J. Crystal Growth* 226 (2001), 231-239

J.S. Walker, A. Cröll, and F.R. Szofran

Thermoelectromagnetic convection in floating-zone silicon growth with a nonaxisymmetric temperature and a strong axial magnetic field. *J. Crystal Growth* 223 (2001), 73-82

P. Dold, K.W. Benz, A. Croell, B. Roux, D. Lyubimov, T. Lyubimova, and R. Scuridyn

Vibration controlled convection - preparation and perspectives of the Maxus 4 experiment. *Acta Astronautica* 48 (2001), 639-646

P. Dold, A. Cröll, F. Szofran, S. Nakamura, T. Hibiya, and K.W. Benz: The role of Marangoni convection for the FZ growth of silicon. *Microgravity and Space Station Utilization* 1 (2000), 31-40 (formerly *Microgravity Quarterly*)

S. Yesilyurt, L. Vujisic, S. Motakef, F.R. Szofran, and A. Croell

The influence of thermoelectromagnetic convection (TEMC) on the Bridgman growth of semiconductors. *J. Crystal Growth* 211 (2000), 360-364

M. Schweizer, A. Cröll, P. Dold, Th. Kaiser, M. Lichtensteiger, and K.W. Benz

Measurement of temperature fluctuations and microscopic growth rates in a silicon floating zone under microgravity. *J. Crystal Growth* 203 (1999), 500-510

K.W. Benz and A. Cröll

Semiconductor crystal growth under microgravity. Results of float-zone technique. *Adv. Space Res.* 24 (1999), 1189-1194

R.N. Grugel, C.P. Lee, A.V. Anilkumar, T.G. Wang, X.F. Shen, A. Cröll, and A. Bune

Promoting microstructural uniformity during floating-zone crystal growth. *Adv. Space Res.* 24 (1999), 1195-1198

A. Cröll and K.W. Benz

Static magnetic fields in semiconductor floating-zone growth.

*Progress in Crystal Growth and Characterization of Materials* 38 (1999), 133-159 **(Invited Review Article)**

A. Cröll, P. Dold, T. Kaiser, F.R. Szofran, and K.W. Benz

The influence of static and rotating magnetic fields on heat and mass transfer in silicon floating zones. *J. Electrochem. Soc.* 146 (1999), 2270-2275

A. Cröll, Th. Kaiser, M. Schweizer, A.N. Danilewsky, S. Lauer, A. Tegetmeier, and K.W. Benz  
Floating-zone and floating-solution zone growth of GaSb under Microgravity.  
J. Crystal Growth 191 (1998), 365-376

A. Cröll, F.R. Szofran, P. Dold, K.W. Benz, and S.L. Lehoczky  
Floating zone growth of silicon in magnetic fields II: Strong static axial fields.  
J. Crystal Growth 183 (1998), 555-563

D.V. Lyubimov, T.P. Lyubimova, A. Cröll, P. Dold, K.W. Benz, and B. Roux  
Vibration-induced convective flows.  
Microgravity. Sci. Technol. XI/3 (1998), 101-106

P. Dold, A. Cröll, and K.W. Benz  
Floating zone growth of silicon in magnetic fields I: Weak static axial fields.  
J. Crystal Growth 183 (1998), 545-553

A. Cröll, M. Schweizer, A. Tegetmeier, and K.W. Benz  
Floating-zone growth of GaAs.  
J. Crystal Growth 166 (1996), 651-656

G. Kloess, A. Cröll, and K.W. Benz  
Contactless measurement of dopant distributions using etched roughnesses.  
J. Crystal Growth 166 (1996), 319-324

A. Tegetmeier, A. Cröll, A. Danilewsky, and K.W. Benz  
GaSb: surface tension and floating-zone growth.  
J. Crystal Growth 166 (1996), 239-244

I. Martinez and A. Cröll  
Liquid bridges and floating zones. In:  
M.G. Velarde and C.I. Christov (Eds.), Fluid Physics  
World Scientific Series on Nonlinear Science, Singapore 1995, 175-192

A. Cröll, P. Dold, and K.W. Benz  
Comparison of floating-zone Si crystals grown under  $\mu\text{g}$  and in an axial magnetic field.  
Trans. Mat. Res. Soc. Jpn. 16A (1994), 685 – 690

- A. Cröll, A. Tegetmeier, G. Nagel, and K.W. Benz  
Floating-zone growth of GaAs under microgravity during the D2-mission.  
Cryst. Res. Technol. 29/3 (1994), 335-342
- A. Cröll, P. Dold, and K.W. Benz  
Segregation in Si-FZ crystals grown under microgravity and in a magnetic field.  
J. Crystal Growth 137 (1994), 95-101
- A. Tegetmeier, A. Cröll, and K.W. Benz  
A formula describing the temperature dependence of surface tension for some semiconductor melts.  
J. Crystal Growth 141 (1994), 451-454
- A. Cröll  
Transition from steady to time-dependent Marangoni convection in silicon melt zones.  
J. Japan Soc. of Microgravity Application, 9 No. 1 (1992), 3 – 14
- A. Cröll, W. Müller-Sebert, K.W. Benz, and R. Nitsche  
Natural and thermocapillary convection in partially confined silicon melt zones.  
Microgravity Sci. Technol. III/4 (1991), 204 – 215 (formerly Appl. Microgravity Technol.)
- A. Cröll, W. Müller-Sebert, and R. Nitsche  
The critical Marangoni number for the onset of time-dependent convection in silicon.  
Mat. Res. Bull.(refereed) 24 (1989), 995 – 1004
- A. Cröll, W. Müller, and R. Nitsche  
Floating-zone growth of surface-coated silicon under microgravity.  
J. Crystal Growth 79 (1986), 65 – 70
